VisualDx[®] ORAL

Now Available! VisualDx Mobile

In just seconds, VisualDx Mobile lets you visually validate a diagnosis, look up next steps for management and care or build a differential diagnosis for puzzling presentations – all from the palm of your hand.

Get VisualDx free for your Apple or Android mobile device! Visit www.visualdx.com/mobile.

VisualDx[®] was recently recognized as the Category Leader for Clinical Decision Support in the 2011 Best in KLAS Awards: Software & Services report and named a "Top Five Medical App" by Harvard Medical School.

What is VisualDx Oral?

VisualDx Oral is an electronic resource for the desktop and mobile devices that combines the power of a comprehensive medical image library with concise specialist-developed clinical information.

- Access over 800 medical images of the oral cavity and systemic disease with oral manifestations.
- Review 90 visually presenting conditions of the oral mucosa.
- Expand clinical knowledge with concise, actionable text including diagnostic pearls, management, therapy and more.

Why VisualDx Oral?

For over 10 years VisualDx has been a trusted resource for medical institutions nationwide. Its unique ability to assist clinicians with the diagnosis and management of common as well as rare conditions expands the level of care, treatment capability, and patient education provided during a preliminary visit.

With a wide range of benign and malignant neoplasms, infectious processes, inflammatory conditions and other disorders of the oral cavity, VisualDx Oral was designed for dentists and oral health care providers at all levels of expertise – and is an indispensable resource for residents and other health care trainees.

How to Use VisualDx Oral?

When you enter VisualDx Oral, the home page provides two options for ease of use. Quickly look up a diagnosis using the search box, or click *Differential Builder* to start developing a visual differential diagnosis based on patient findings.

In just seconds, VisualDx Oral lets you:

- Visually validate a patient's diagnosis.
- Quickly access next steps for management and care.
- Develop a patient-relevant differential diagnosis.
- Provide patient education with images they can relate to.

VisualDx – see, learn, discern to more accurately diagnose disease.
